Safety Precautions

Before getting started, please read the following important safety precautions.

1. The AIE100-T2NX does not come with an operating system which must be loaded first before installation of any software into the computer.

2. Be sure to ground yourself to prevent static charge when installing any internal components. Use a wrist grounding strap and place all electronic components in any static-shielded devices. Most electronic components are sensitive to static electrical charge.

3. Disconnect the power cord from the AIE100-T2NX prior to making any installation. Be sure both the system and all external devices are turned OFF. Sudden surge of power could ruin sensitive components. Make sure the AIE100-T2NX is properly grounded.

4. Make sure the voltage of the power source is correct before connecting it to any power outlet.

5. Turn Off system power before cleaning. Clean the system using a cloth only. Do not spray any liquid cleaner directly onto the screen.

6. Do not leave equipment in an uncontrolled environment where the storage temperature is below -40°C or above 80°C as it may damage the equipment.

7. Do not open the system’s back cover. If opening the cover for maintenance is a must, only a trained technician is allowed to do so. Integrated circuits on computer boards are sensitive to static electricity. To avoid damaging chips from electrostatic discharge, observe the following precautions:
   - Before handling a board or integrated circuit, touch an unpainted portion of the system unit chassis for a few seconds. This will help discharge any static electricity on human body.
   - When handling boards and components, wear a wrist grounding strap available from most electronic component stores.

8. Note!! Caution with touch! AIE100-T2NX will be hot when it's on.
Classification

1. Degree of production against electric shock: not classified
2. Degree of protection against ingress of water: IP40 (IP42 rating by optional cover kit)
3. Equipment not suitable for use in the presence of a flammable anesthetic mixture with air, oxygen or nitrous oxide.
4. Mode of operation: Continuous

⚠️ Note: All of I/O connectors should be connected with corresponding cables when the system is operating with IP40 & IP42 rated definition. If some of I/O ports are not be used or connected during operation, users must to connect optional I/O covers to meet IP40 & IP42 standard.
General Cleaning Tips

Please keep the following precautions in mind while understanding the details fully before and during any cleaning of the computer and any components within.

A piece of dry cloth is ideal to clean the device.
1. Be cautious of any tiny removable components when using a vacuum cleaner to absorb dirt on the floor.
2. Turn the system off before clean up the computer or any components within.
3. Avoid dropping any components inside the computer or getting circuit board damp or wet.
4. For cleaning, be cautious of all kinds of cleaning solvents or chemicals which may cause allergy to certain individuals.
5. Keep foods, drinks or cigarettes away from the computer.

Cleaning Tools:
Although many companies have created products to help improve the process of cleaning computer and peripherals, users can also use household items accordingly for cleaning. Listed below are items available for cleaning computer or computer peripherals.

Pay special attention to components requiring designated products for cleaning as mentioned below.

- Cloth: A piece of cloth is the best tool to use when rubbing up a component. Although paper towels or tissues can be used on most hardware as well, it is recommended to use a piece of cloth.
- Water or rubbing alcohol: A piece of cloth may be somewhat moistened with water or rubbing alcohol before being rubbed on the computer. Unknown solvents may be harmful to plastic parts.
- Absorb dust, dirt, hair, cigarette and other particles outside of a computer can be one of the best methods of cleaning a computer. Over time these items may restrict the airflow in a computer and cause circuitry to corrode.
- Cotton swabs: Cotton swaps moistened with rubbing alcohol or water are applicable to reach areas in keyboard, mouse and other areas.
- Foam swabs: If possible, it is better to use lint free swabs such as foam swabs.

⚠️ Note: It is strongly recommended that customer should shut down the system before start to clean any single components.

Please follow the steps below:
1. Close all application programs;
2. Close operating software;
3. Turn off power switch;
4. Remove all devices;
5. Pull out power cable.
Scrap Computer Recycling

If the computer equipment's needs the maintenance or are beyond repair, we strongly recommended that you should inform your Axiomtek distributor as soon as possible for the suitable solution. For the computers that are no longer useful or no longer working well, please contact your Axiomtek distributor for recycling and we will make the proper arrangement.

SECTION 1
INTRODUCTION

This chapter contains general information and detailed specifications of the AIE100-T2NX. The Chapter 1 includes the following sections:

- General Description
- System Specifications
- Dimensions
- I/O Outlets
- Packing List
- Model List

1.1 General Description

The AIE100-T2NX is an embedded system with NVIDIA® Jetson™ TX2 NX Series supercomputer on a module to support Linux Ubuntu 18.04, suitable for the most endurable operation.

It features fanless design with full feature I/O, one 4 GB 128-bit LPDDR4 memory, and enhanced system dependability by built-in Watchdog Timer.

- Features
  1. NVIDIA® Jetson™ TX2 NX with 256-core NVIDIA Pascal™ GPU
  2. High AI computing performance for GPU-accelerated processing
  3. Ideal for various edge AI applications at smart city and smart retail
  4. Optional IP42 rating cover kit for semi-outdoor applications
  5. Supports 1 USB 2.0, 1 USB 3.1 Gen1, 1 GbE LAN and 1 GbE PoE
  6. JetPack supported
AIE100-T2NX Series User’s Manual

- **Reliable and Stable Design**
  The AIE100-T2NX adopts the advanced fanless system and supporting the PCIe x4 NVMe through M.2 interface, which makes it especially suitable for AI computing environments, best for smart city, GPU-accelerated processing, edge computing and smart retail applications.

- **JetPack Supported**
  The AIE100-T2NX supports JetPack 4.5.1 or later. NVIDIA JetPack SDK is the most comprehensive solution for building AI applications.

  JetPack supports Jetson AGX Xavier™, Jetson Xavier™ NX, Jetson™ TX2 NX, Jetson™ Nano and Jetson TX2 series. It bundles all the Jetson platform software, including TensorRT, cuDNN, CUDA Toolkit, VisionWorks, GStreamer, and OpenCV, all built on top of L4T with LTS Linux kernel.

- **O.S. Supported**
  The AIE100-T2NX supports Linux Ubuntu 18.04.

- **Various Storage devices supported**
  For storage device, the AIE100-T2NX supports one M.2 2280 Key M with PCI-Express 2.0 x4 interface, an onboard 16GB eMMC 5.1 and one Micro SD interface.

### 1.2 System Specifications

#### 1.2.1 Product Specification

- **NVIDIA Jetson SoM**
  - NVIDIA® Jetson™ TX2 NX SoM

- **CPU**
  - Dual-Core NVIDIA Denver 2 64-Bit CPU and Quad-Core Arm® Cortex®-A57 MPCore processor

- **GPU**
  - 256-core NVIDIA Pascal™ GPU

- **Storage**
  - 16GB eMMC 5.1 onboard
  - One M.2 2280 M Key with PCI-Express 2.0 x4 NVMe SSD slot
  - One Micro SD slot to support optional Micro SD card (UHS-I compatible)

- **System Memory**
  - One 4 GB 128-bit LPDDR4 onboard

- **WLAN & WWAN**
  - One PCI Express Mini Card modules slot to support Wi-Fi or 3G/4G/LTE modules
1.2.2 I/O System

- One HDMI 2.0 for display (HDMI 2.0 Resolution: up to 4096 x 2160@60Hz)
- One RJ-45 connector for 10/100/1000 Base-T Ethernet port
- One RJ-45 connector for 10/100/1000 Base-T PoE (IEEE 802.3af; PSE), max. up to 15.4 Watts

⚠️ Note: AIE100 is a power supply device. Two PSE devices should not be connected together, which may cause the risk of power conflict. Correctly connect PD Device or switch without PoE. If you need PoE switch, please find the switch with uplink port.

- One USB 2.0 and one USB 3.1 Gen1 connectors
- Front-access design for ease of updating NVIDIA Jetpack
  - One Micro USB connector for image flash only
  - One Recovery switch
- One Micro SD slot for extra storage (UHS-I compatible)
- One M.2 2280 Key M with PCI-Express 2.0 x4 SSD slot for extra storage
- One full-size PCI Express Mini Card slot (USB + PCI Express signal)
- One Power button and one Reset button
- Two Indicators LEDs (System Power, M.2 Storage)
- Two SMA type connector openings for Antenna
- One 12VDC Power Jack connector
1.2.3 System Specification

- **Watchdog Timer**
  - Built-in NVIDIA® Jetson™ TX2 NX Series SoM

- **Power Supply**
  - Input: 12VDC

- **Operation Temperature**
  - -30°C to +60°C (-22°F to +140°F)

- **Humidity**
  - 10% ~ 95% (non-condensation)

- **Vibration Endurance**
  - 3Gsm w/ M.2 SSD Storage (5-500Hz, X, Y, Z directions)

- **Weight**
  - 1 kg (2.20lb) without package
  - 1.6 kg (3.52lb) with package

- **Dimensions**
  - 148.6 mm (5.85") (W) x 129.8 mm (5.11") (D) x 34.6 mm (1.36") (H)

**Note:** All specifications and images are subject to change without notice.
1.3 Dimensions

The following diagrams show you dimensions and outlines of the AIE100-T2NX.

1.3.1 System Dimension
1.3.2 Wall mount Bracket Dimension (Screw: M3 *4L 4pcs)
1.3.3 Din-rail mount Bracket Dimension (Screw: M3*4L 8pcs)
1.3.4 VESA arm mount Bracket Dimension (Screw: M3 *4L 4pcs)
1.4 I/O Outlets

The following figures show you I/O outlets on front view of the AIE100-T2NX.

- Front View drawing

- Rear View drawing
1.5 Packing List

The package bundled with your AIE100-T2NX should contain the following items:

- AIE100-T2NX System Unit x 1
- Foot pad x 4
- Screws Pack x 1
- Thermal pad x 3 (for M.2 M-Key SSD)

※Regarding the latest product manual, please download them from Axiomtek official website.

1.6 Model List

If you cannot find this package or any items are missing, please contact Axiomtek distributors immediately.
SECTION 2
HARDWARE INSTALLATION

The AIE100-T2NX is convenient for your various hardware configurations, such as SSD (Solid State Drive), Micro SD card, and PCI Express Mini Card modules. The chapter 2 will show you how to install the hardware.

⚠️ Note: Waterproof capability of the IPX2 rating may be affected if a system is disassembled or improperly assembled; under such circumstances Axiomtek shall not be liable for any quality deterioration.

Besides assembling the optional IP42 rating cover kit, please refer to tightening torque below for all system screws and waterproof antenna connectors to ensure the waterproof capability:

☉ Philips screws at bottom side: 6Kgf-cm

☉ Waterproof antennas connector of SMA cables: 6Kgf-cm

⚠️ Note: To support the IP42 rating, AIE100-T2NX must be installed with waterproof SMA cables.
2.1 Installing the PCI Express Mini Card

Step 1  Turn off the system, and unplug the power adaptor.

Step 2  Turn the system upside down to locate screws at the bottom side as red marked and loosen four screws.

Step 3  Remove the bottom cover, and locate PCI Express mini card slot on the board.
Step 4  Holding the PCI Express mini card at a 45 degree angle up from horizontal, slowly insert the golden fingers into the PCI Express slot until it is fully inserted in.

Step 5  Press it down gently, but firmly, and then secure the PCI Express mini card to the carrier by tightening up the one M2 Phillips screw to the marked position.
2.2 Installing LTE or Wi-Fi Antenna Cable

Step 1  Install the Mini PCIe card into the Mini PCIe slot and affix it with a screw. For more details, please refer to section 2.1: Installing the PCI Express Mini Card.

Step 2  Take the Antenna kit out of its box, and remove the hex nut and washer from the Antenna cable.

⚠️ Note: The LTE and Wi-Fi module comes with the different type of SMA cable, one is IPEX, and another one is IPEX4, please do not mix and match them.
Step 3  Install the antenna cable connector through the opening at the rear of the chassis.

Step 4  Put the washer and Hex nut into the antenna cable connector, and tighten it up.
Step 5  Connect the antenna cable to the PCI Express mini card.
2.3 Installing the M.2 2280 Key M SSD Drive

Step 1 Turn off the system, and unplug the power adaptor.

Step 2 Turn the system upside down to locate screws at the bottom side as red marked and loosen four screws.

Step 3 Remove the bottom cover, and locate the M.2 2280 Key M slot on the board.
Step 4  Take 3pcs thermal pads out of its box.

Step 5  Apply one thermal pad on the M.2 2280 Key M slot.
Step 6  Holding the M.2 2280 Key M SSD drive at a 30 degree angle up from horizontal, slowly insert the golden fingers into the M.2 2280 Key M slot until it is fully inserted in.

Step 7  Press it down gently, but firmly, and then secure the M.2 2280 Key M SSD drive to the carrier by tightening up the one M3 Phillips head screw to the marked position.
Step 8  Apply another two thermal pads on the M.2 2280 Key M SSD drive.

⚠️ **Note:** The thickness of the SSD drive may be different by the different manufacturers, to avoid system damaged by forced closing of the bottom cover and improperly installed. Please check M.2 thickness first to decide to apply how many pieces thermal pads on the M.2 SSD Drive, or please install the M.2 SSD Drive suggested by Axiomtek.

⚠️ **Note:** Thermal Pads dimension: 60mm (L) x 25mm (W) x 2mm (H)
2.4 Installing the MicroSD Card

Step 1  Turn off the system, and unplug the power adaptor.

Step 2  Turn the system upside down to locate screws at the bottom side as red marked and loosen four screws.

Step 3  Remove the bottom cover, and locate MicroSD icon on the board.
Step 4  Turn the MicroSD card upside down, and hold it with fingers at a 30 degree angle up from horizontal, and then insert and press it gently.
SECTION 3
JUMPER SETTING & CONNECTOR

Proper jumper settings configure the AIE100-T2NX to meet your application purpose. We are here with listing a summary table of all jumpers and default settings for onboard devices, respectively.

3.1 Jumper & Connector Location
Note: We strongly recommended that you should not modify any unmentioned jumper setting without Axiomtek FAE’s instruction. Any modification without instruction might cause damage to the system.
### 3.2 Connectors

Connectors connect the board with other parts of the system. Loose or improper connection might cause problems. Make sure all connectors are properly and firmly connected. Here is a summary table shows you all connectors and button on the AIE100-T2NX Series.

3.2.8 SIM Card Slot (SCN3)

AIE100-T2NX comes with SIM Card Slot (SCN3) for inserting SIM Card. In order to work properly, the SIM Card must be used together with 3G/LTE module which would be inserted to PCI-Express Mini Card Connector (SCN1). It is mainly used for 3G/LTE wireless network application.

3.2.10 Ethernet Ports (LAN1, LAN2)

The AIE100-T2NX comes with two RJ-45 connectors: LAN1 (NVIDIA® Jetson™ TX2 NX) and LAN2 (Intel® I210-IT). LAN1 is a GbE port, but LAN2 is the GbE PoE port (non-isolated), which is compliant IEEE 802.3af class 3, and the total power budget is 15.4 Watts maximum.

SECTION 4
JETPACK BSP FLASH METHOD

This chapter provides users with a detailed description of how to flash NVIDIA Jetpack BSP for AIE100-T2NX, the user could follow the below instruction to install or reinstall Jetpack BSP by themselves.

4.1 Jetpack Flash Method

Please use the following instructions to flash the JetPack to the AIE100-T2NX.

Please contact our sales or FAE for the latest Jetpack SDK, and prepare a Linux host system running x86_64 Ubuntu v16.04

⚠️ Note: If the Linux host system is running x86_64 Ubuntu v18.04, please follow the instructions below to install Python first.

- Step 1. Connect the Linux host system to internet
- Step 2. Install Python with the command below:

```
sudo apt-get update
sudo apt-get install python
```

Step1. AIE100-T2NX connection as follows:

- Connect a USB cable from the Linux host system to the Micro USB port at AIE100-T2NX, and switch the recovery switch to ON. For more details, please refer to 3.2.13 Recovery Mode Switch (SSW2).
- Connect an HDMI monitor to AIE100-T2NX.

Step2. Open the terminal at the host system, and change the path to the image file directory, e.g., "~/Downloads", and check image tarball data integrity with the following commands:

```
$ cd ~/Downloads
$ md5sum -c <image_tarball_file_name>.tbz2.md5sum
```

⚠️ Command Example:

```
$ md5sum -c mfi_jetson-tx2-nx-JP4.6.2-AIE100-T2NX-V1.0.0.tbz2.md5sum
```

Jetpack BSP Flash Method
Step 3. If the check result returns OK, untar the image file with the command below:

```
$ tar jxvf <image_tarball_file_name>.tbz2
```

**Command Example:**

```
$ tar jxvf mfi_jetson-tx2-nx-JP4.6.2-AIE100-T2NX-V1.0.0.tbz2
```

Step 4. Change the directory to the image package folder with the command below:

```
$ cd <image_file_name>
```

**Command Example:**

```
$ cd mfi_jetson-tx2-nx-JP4.6.2-AIE100-T2NX-V1.0.0
```

Step 5. Make sure the recovery switch (SSW2) has been switched to ON, and run the command lsusb, then the command line “0955:7c18 Nvidia Corp.” should be listed.

```
$ lsusb
```

**Command Example:**

```
$ lsusb
```

```
Bus 000 Device 001: ID 1d6b:0003 Linux Foundation 3.0 root hub
Bus 001 Device 071: ID le:0002 Sigma Micro Keyboard TRACER Gamma Ivory
Bus 001 Device 040: ID 0955:7c18 Nvidia Corp
Bus 002 Device 005: ID 05e3:0600 Genesis Logic, Inc. Hub
Bus 001 Device 004: ID le:0003 Sigma Micro
Bus 001 Device 001: ID 1d6b:0002 Linux Foundation 2.0 root hub
```
Step 6. Running the following command to flash the image.

```sh
$ sudo ./nvmflash.sh
```

Step 7. The flashing procedure takes approximately 20 minutes or more. Once finished, you should see “Flash complete (SUCCESS)” as shown below, and AIE100-T2NX will automatically reboot, and please switch the recovery switch (SSW2) to OFF to return to standard mode.

THE DEFAULT LOGIN CREDENTIALS:

Username: nvidia        Password: nvidia

※CAUTION:

Running

```sh
$ sudo apt upgrade
```

command for NVIDIA JetPack OTA may overwrite the BSP of the AIE series platform, which can cause unexpected results including losing I/O ports. For regular JetPack updates or reflashing, please contact our sales or FAE to get the latest AIE Series JetPack image.
4.2 Image Information Inquiry Command

Running `axiomtek.sh` command to inquiry the current image information, image version, L4T version, Linux kernel version, and Ubuntu version.

```
nvidia@nvidia-desktop:~$ axiomtek.sh
BUILD_MODEL=Jetson-TX2_NX
BUILD_VERSION=JetPack-4.6.2_Linux
BSP_BUILD_VERSION=V1.0.0
BSP_BUILD_COMMIT_ID=master_8e728a38f
BUILD_DATE=2022/05/27 09:01:18
BUILD_ID=axio
L4T_VERSION=R32-7.2
LINUX_KERNEL_VERSION=4.9.253
UBUNTU_VERSION=Ubuntu 18.04.6 LTS
nvidia@nvidia-desktop:~$ 
```
4.3 JTOP — Third-party Jetson Platform Monitor Tool

JTOP is a third-party system monitoring utility that runs on the terminal and see and control realtime the status of the AIE Series Platform. CPU, RAM, GPU status, power mode management, toolkits version and more.

**Installation Guide:**

Please connect to the internet and enter the following commands in the terminal to install JTOP.

```
$ sudo apt install python-pip python3-pip
$ sudo -H pip install -U jetson-stats
```

Once installation is completed, reboot the device and then type the below command in the terminal to launch JTOP:

```
$ sudo jtop
```

⚠️ **Note:** JTOP may require approximately 200 to 300 MB of storage space.
