Axiomtek WEEE, RoHS and REACH Compliance Statement

When it comes to product design, the engineering team at Axiomtek strives for energy efficiency and environmental friendliness—not only because it lowers monthly power costs for our clients, but also to ensure minimal energy consumption for a greener tomorrow.

Though our products are not officially certified, they are in fact compliant with WEEE (2012/19/EU), RoHS (Directive 2011/65/EU, (EU)2015/863) and REACH standards. This means we take care to properly recycle all unused material and end-of-life products, as well as minimize the use of potentially hazardous substances.

It is not required by law that certain fixed industrial plant equipment and tools entirely omit the use of lead, mercury, cadmium, and hexavalent chromium and flame retardants such as polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE). However, Axiomtek assumes the responsibility to restrict the inclusion of these resources in all products, meeting the requirements of RoHS and WEEE standards.

To further our effort, the Axiomtek Environmental Management System (EMS) voluntarily complies with ISO 14001 standards.
